DISEÑO E INNOVACIÓN

"DESIGN AND INNOVATION FOR
21ST CENTURY EDUCATION"

Nº2

We face immense challenges in education, and there is still much room to innovate. The use of design and its working methods contribute to reflect and solve diverse issues in areas such as: curriculum design, spaces and educational experiences; processes, tools and resources to support teaching, among others.

This challenge requires synergies between governmental entities, educational settings and the professional world.

We invite you to submit academic articles with research, case studies and reflections on the question: how might we innovate in education from the design discipline?
